## **EDU 622 Meeting the Needs of Exceptional Learners in the Inclusive Classroom** **Key Assignment: Observation Project**

The **Observation Project** is designed to develop precise, writing skills which accurately and objectively describe individuals observed in an educational setting. This report requires a focus on what you observe – **not what you do not observe**. You must report what YOU see or hear. Keep this in mind: you must “see, hear, count or measure” the behavior in order to write about it.

This exercise helps to develop skill in non-biased reporting of student performance free of assumptions and judgmental language.

**Observation Report:** View the assigned video and complete the attached templates.  
Select related research literature and develop summaries (4)  
Create APA style reference page for articles.  
Create Functional Behavior Assessment (FBA) based on  
Observation material  
Create Behavior Improvement Plan (BIP) based on FBA

The Observation Report template will be limited to two (2) pages

The articles must be peer-reviewed, research based (include information about the subjects, methodology for data gathering and results) and related to the exceptionality observed.

The articles must show evidence of investigation of the most recent literature - within the past 5 years.

These observations will be assessed according to the Observation Report Assessment Rubric

Link all document templates (report, article reviews, reference page, FBA, BIP) and submit as one.
